

Summer AP biology work

Read and take notes on the first three chapters of Campbell and Reece *Biology*.

On a separate set of papers, answer all the questions in each concept check for each chapter. Each answer must be in complete sentences and the question should be written first followed by the answer. Also, at the end of each chapter is a self quiz. Please answer those for each chapter (1 through 3) and give a biological explanation as to why you chose that answer.
